1.2. ALGORITHM SPECIFICATION Ci! 1.2 ALGORITHM SPECIFICATION 1.2.1 Pseudocode Conventions In computational theory, we distinguish between an algorithm and a program. The latter does not have to satisfy the finiteness condition. For example, we can think of an operating system that continues in a "wait" loop until more jobs are entered.

The Art of Computer Programming (TAOCP) is a comprehensive monograph written by computer scientist Donald Knuth that covers many kinds of programming algorithms and their analysis.. Knuth began the project, originally conceived as a single book with twelve chapters, in 1962. The first three volumes of what was then expected to be a seven-volume set were published in 1968, 1969, and 1973.

It starts looking for the target word t from the first word in the dictionary (Dic[0]) to the last word (Dic[n-1]). The conclusion "not found" is made only after every word is checked. On the other hand, the second algorithm—binary search—takes advantage of the alphabetic ordering of the words in a dictionary.

The next step on our journey is insertion sort. It is very similar to selection sort, but adds a little bit more ingenuity. This is the next logical step and gives us the the last piece of the puzzle to start building more advanced algorithms. This is why computer science classes typically cover this sorting algorithm here.
