Pig Heart Lab Answer Key - mail.trempealeau.net

In this lab you will be dissecting a preserved pig heart. Preserved pig hearts are the most commonly dissected mammalian heart. The pig heart is very similar to a human heart, in that they both contain four chambers, and are similar in size. Since the pig heart and the human heart are so alike, you will be dissecting the pig heart in this dissection lab . Objectives:

-pair of scissors -probe -pig heart Procedure – External Structure:
1. Put on your goggles and lab coat. Have one group member collect the materials and take them back to your lab station. 2. Place a heart in the dissecting pan on the wax paper. 3. Locate the tip of the heart or the apex. Only the left ventricle extends all the way to the apex. 4.

Pig heart dissection

Dissecting pan, dissecting kit, safety glasses, lab apron, pig heart, & gloves. Procedure – External Structure. Place a heart in a dissecting pan & rinse off the excess preservative with tap water. Pat the heart dry. Examine the heart and locate the thin membrane or pericardium that still covers the heart. The pericardium or pericardial sac, is a double-layered closed sac that surrounds the heart and anchors it.
