1. Traditional Output is based on results of analysis of the stroke rate and boat rigging, which were conducted during major world regattas: World Championship and Olympic Games. These are the average values currently used by elite rowers(RBN 2006/11). 2. Innovative Output is based on results of biomechanical modelling.

Rowing Speed & Rigging chart - BioRow

How a shell is rigged determines how much leverage each rower has with the oar through the rigger. The four factors affecting the leverage are blade size, oar length, inboard length, and rigger spread. The crux of rigging the leverage is finding the right balance between load and efficiency for your athletes.

Masters Rigging Presentation - Rowing British Columbia

Moving the stretcher backwards or forwards changes the arc of work: In sweep-oar rowing this arc (x + y) is about 90° and in sculling about 110°. In a faster boat (e.g. an eight) you want more work in front of the pin, and in a slower boat (e.g. a pair) more work behind the pin.

EVERYTHING YOU EVER WANTED TO KNOW ABOUT RIGGING

Setting one's boat and oars up is very particular to either the athlete or the crew. Below, we have provided some basic recommendations for spread/span, inboard and overall oar length for each boat class. These should be considered a starting point, but will certainly help get your rigging started down the correct path.

Rigging Charts - Boat & Oar Setup | Durham Boat Company

The three main parts to any load lifting operation are the lifting equipment (crane/derrick/ hoist), the operator/operation of the equipment, and the rigging of the load. This guide focuses on the rigging of the load.

Rigging Safety Guide - MCAA

Six steps and common sense about rowing shell care and maintenance. In the end, how long your shell lasts depends on how well you care for it. Be a vigilant owner: keep your boat clean, be careful how you store, move and repair it, and you should be rewarded with a boat that is rowed well into the future.
